ABSTRACT

Beauty in the world is perceived solely through the visual effects of our eye. To visually see pictures created by human or even natural made beauty require elements of beauties color plays and important role in perception of beauty. Color is reflected absorbed by the human eyes and considered as one of the most full fulfilling elements in our lives. So without color, how can human, civilization can has been fascinated by color from ancient to present time color also influenced human emotions and mood. Color and its usage technique is the basic element of visual communication from glamorous colored dresses and houses decorations. It can also bring harmonious senses and bring a wonderful life to those who will Perceive if it caused commercial market bloom / increases thus showed the value of color the Three main criterias as follows, Know the psychology of color, Know how to use color properly, Identity different colors and harmonious color.

Keywords : Color / Aesthetic / Communicate
Importance of Color

Have you ever wondered why you seem to be getting hungrier while waiting to place your order at a fast food place or why you eat faster than any human should ingest that poison? Have you ever heard of a “power tie” in business?

1. The Psychology of Color in Design

There are things that excite the human’s senses. Aromatherapy and the sense of smell bring about mood and emotional change. Taste, touch and audible sensations bring about the same changes, so it’s not surprise that visuals also bring about emotional changes in humans. Color is light and light is energy. Scientists have found that actual physiological changes take place in human beings when they are exposed to certain colors. Colors can stimulate, excite, depress, tranquilize, increase appetite and create a feeling of warmth or coolness. This is known as Chromodynamics.

2. Instant Shift - The Psychology of Color In Design

In 1666, English scientist, Sir Isaac Newton, discovered that when pure white light passes through a prism it separates into all of the visible colors. Newton also found that each color is made up of a single wavelength and cannot be separated any further into other colors. Color has the power to suggest mood and emotion and, used the correct way, you can move people to become excited, fearful, playful, relaxed and powerful.

Color is an important factor to our life because color can make our life bright or sad. It is in fact very important because color helps us understand the environment. So we should know more about kinds of color scheme and its special meaning.

- Harmonious color
- Contrast color

Characteristic of harmonious color

Harmonious color means using of similar weight color or color close together such as the use of monochrome color which has light weight using multiple color such as 2-3 color in a cycle of colors like red, orange claret color, Similar color mean using not more than 5 color use warm tone color and cool tone color.

Characteristic of contrast color

Contrast color means opposite color is the cycle of color and very important is in decorate job, Contrast color has 6 pairs of color to make a beautiful picture it ration 80 and 20 is using a type of color or must consider different ratio regardless of unity such as 20 red and 80 green. Several colors combined can be used like combining contrast color and harmonious color

1. Yellow opposite of purple
2. Orange color with 80 red
3. Red combined with 20 green
4. Yellow and orange combined with purple and blue
5. Orange and red opposite
6. Claret opposite with yellow and green
Psychology of perception

According to Lind tom, Van Au ken and Days, concept of brand identity, the important color, color is the main element in design organization. There is identical impact in human emotions, in the physical and social science the meaning of symbol in graphic design are see follows.

1. Colors, not in the primary color is less motivating/stimulating.
2. In the primary colors, blue is the least stimulating followed by bright red color.
3. Letters in blue increase memory in reading.
4. Yellow stimulates happiness the house painted in yellow or designed in yellow or it have many flowers in the garden will easily be sold.
5. (Yellow) and orange make people hungry easily and eat faster, While red makes food more appetizing and stimulates people to eat more, this is the reason many fast food restaurants decorate with these colors.
6. Pink makes many people hungry and also makes people with mental disorder lose motivation.
7. Black and blue make people their appetite.
8. Children like the primary colors for toys and books.
9. Dark green and red burgundy mean wealth in the USA and increase sale price.
10. Orange color lowers the price of a product.
11. Red represents power.
12. Bars and casinos are trimmed with red to makes people forget the time.

Understanding basic color design principle make beautiful output. Those who study principles of design, sketching or painting (composition picture) include goals or objectives. What to do? Why do it? What is it for? How to do? Design experts usually bring examples of their work to show samples of how they use it.

The big fast food giants have similar colors for their brands, which stimulate and excite. Oddly enough, Whataburger, a smaller chain, uses muted colors for a friendly retro feel. Coke also uses the power of a warm red, giving the feel of a lazy summer day. Which website entices you the most? Our personal and cultural associations affect our experience of color. Colors are seen as warm or cool mainly because of long-held (and often cross-cultural) associations. Yellow, orange and red are associated with the heat of sun and fire; green, blue and violet with the coolness of leaves, sea and the sky. Warm colors seem closer to the viewer than cool colors, but vivid cool colors can overwhelm light and subtle warm colors. Using warm colors for foreground and cool colors for background enhances the perception of depth and suggests peace and tranquility. Warm colors in the foreground and cool colors in the background can suggest a sense of foreboding.

Have you ever wondered why you seem to be getting hungrier while waiting to place your order at a fast food place or why you eat faster than any human should ingest that poison? Have you ever heard of a “power tie” in business?

There are things that excite the human senses. Aromatherapy and the sense of smell bring about mood and emotional change. Taste, touch and audible sensations bring about the same changes, so it’s no surprise that visuals also bring about emotional changes in humans. Color is light and light is energy. Scientists have found that actual physiological changes take place in human beings when they are exposed to certain colors. Colors can stimulate, excite, depress, tranquilize, increase appetite and create a feeling of warmth or coolness. This is known as Chromodynamics.

Color of shops and buildings of the town look like nature, color and font style the identity of a community-based economic, social and environmental conditions, the picture shows the classify cation requirements and buildings in each setting.
When eyes on the road is often found to work of the artist, the buildings and community centers in the area, it also shows a close relationship with the public, easily accessed by a harmony of colors, shape buildings remains the quality of life for the community.

A case study of renovate library design in the faculty of Industrial Textiles and Fashion Design, Rajamangala University of Technology Phra Nakhon

Redesign the corporate identity of library in the faculty of Industrial Textiles and Fashion Design, Rajamangala University of Technology Phra Nakhon

Nowadays, every organization is strongly concerned with the design to create typical identity. The design to build surrounding that can inform the good appearance of organization will help target group to remember and recognize, as well as the aspect that conform to the purpose of the organization. After monitoring the appearance in the faculty of Industrial Textiles and Fashion Design ’s library of Rajamangala University of Technology Phra Nakhon, there are some problems related to the library’s identity, such as no logo, sign or public relations. Thus, these will initiate the design to develop the new image of the library

Figure 15. Show old Library faculty of Industrial Textiles and Fashion Design, Rajamangala University of Technology Phra Nakhon. Source: Thitima Putthabhucha Relate: 15/09/2557

Information’s Background

On September 15, 1989, King Bhumibol Adulyadej had given the name “Rajamangala Institute of Technology” to Institute of Technology and Vocational Education. After that, in 2005, there was the ACT that established Rajamangala University of Technology, one of which was Rajamangala University of Technology Pha Nakhon. This institution included 9 faculties. Nowadays, Chumphon Khet Udomsak Campus has been changed to faculty of Industrial Textiles and Fashion Design.

- Vision
  Being leader of educational management of Garment and Fashion and developing to meet high standard, based on science and technology

- Obligation
1. Arranging education in college level, emphasizing garment and fashion’s profession, based on science and technology.

2. Operating research or innovation, based on science and technology, in order to transmit and add value to the nation.

3. Providing educational service to build and develop career in high competitive level.

4. Maintaining art, culture and environment.

Objective

To enhance image and internal building’s display system for the library in the faculty of Industrial Textiles and Fashion Design, Rajamangala University of Technology Pha Nakhon.

Concept

New dimension in learning

Scope

Design logo, board or display system and model picture presenting internal building change of library in the faculty of Industrial Textiles and Fashion Design, Rajamangala University of Technology Pha Nakhon.

Target Group

- students and staff of Rajamangala University of Technology Pha Nakhon.
- people having interest in garment and fashion.

Mood and Tone Modern Bright

Conclusion

All of the aforementioned it can be seen that the world is not the lack of color, to communicate the sense that human or society will be, the colors that make history or identity of the country and the province, make the spectator catch fascinate recall or imagine. In addition, the advertising industry must learn the core subjects, whether the principles and psychology of color, These colors make us feel different conditions such as hunger, satiety, or even depression and boredom, because the color can complement the sense of beauty and human needs, however, all these colors are just artistic elements that influence the feelings only. A designer or interested person may be under and as meaning that alone is not enough. To practice and learn the art of other in order to communicate meaning the most such as point, line, shape, shadow or space to help create media beautifully and cause delight upon receiving or viewing. The media alone for the 21st century will not be enough. Because the technology that we have play a role in the digital media as well.
